e) **Log-in to your postgresql account, go to demoDB database and create a table called customers with the following columns:**

- id set as SERIAL PRIMARY KEY
- firstName set as VARCHAR(120)
- lastName set as VARCHAR(120)
- email set as VARCHAR(120) UNIQUE
- total set as NUMERIC Note: submit a code of the SQL code and the screenshot of table customers

Code:

```
CREATE TABLE customers(
    id SERIAL PRIMARY KEY,
    firstName VARCHAR(120),
    lastName VARCHAR(120),
    email VARCHAR(120),
    total NUMERIC
)
```

Screenshot of the table customers

id	firstname	lastname	email	total
[PK] integer	character varying (120)	character varying (120)	character varying (120)	numeric
